

The Global NARS Consortium (GNC)

Transforming the Agri-Food System (AFS)
through multi-level collaboration

supported by

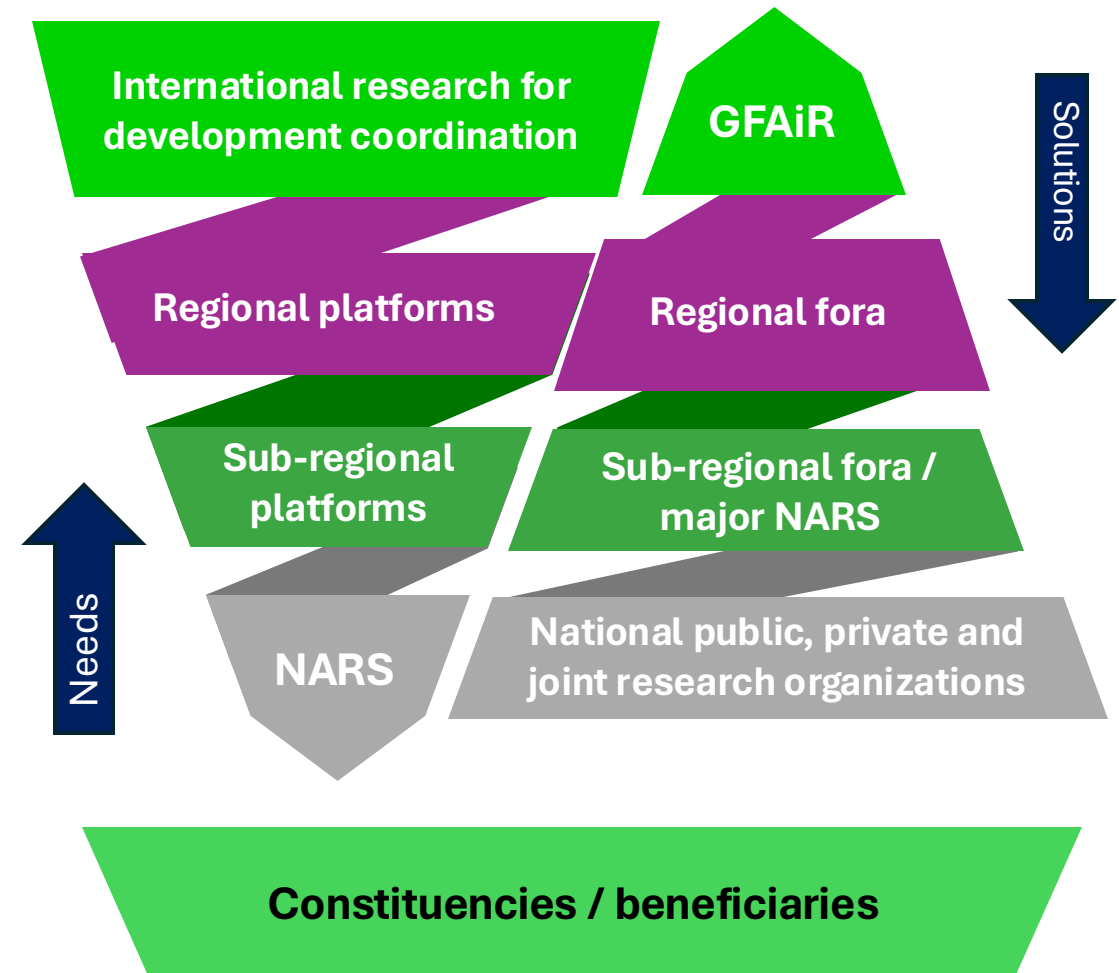

on Agricultural Research for Development
EFARD

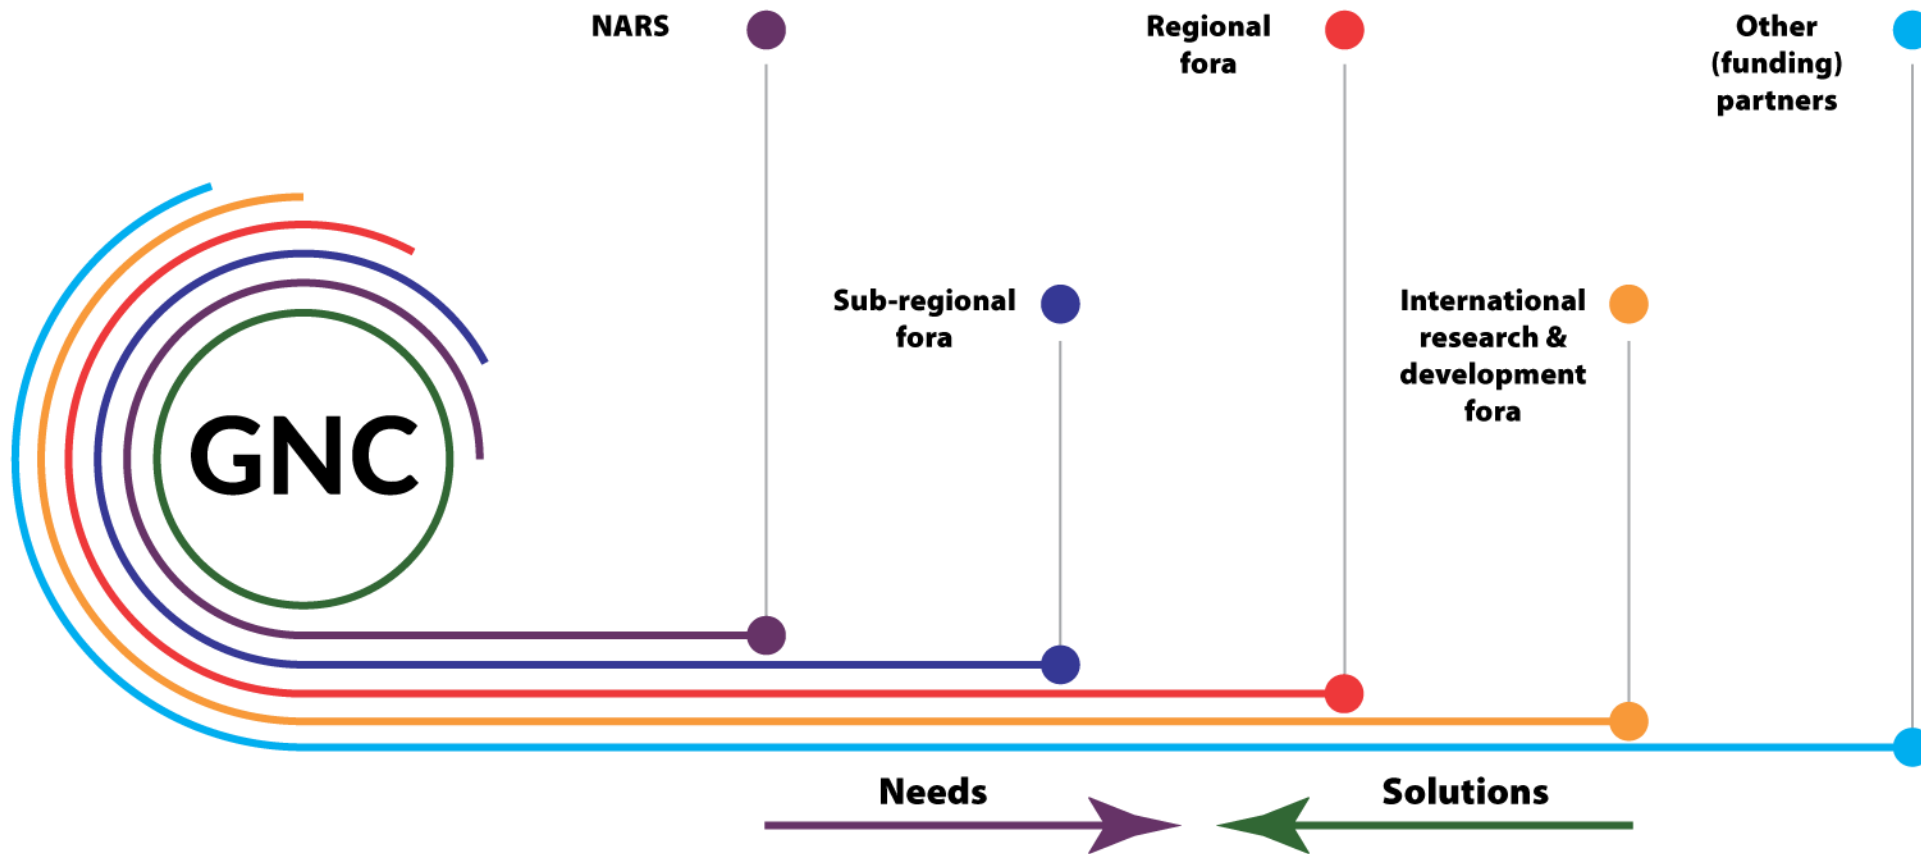

Why a Global NARS Consortium

- **Global agricultural systems** face unprecedented challenges: food insecurity, climate change, and diminishing resources.
- **NARS** vary widely in their nature, structure, level of development, and degree of integration within the innovation ecosystem.
- To address these issues, the GNC provides a **multi-level and multi-stakeholder system**.

GNC at a glance

Accelerating AFS transformation: the role of the GNC

The GNC

- **bridges the gap** between international research (CGIAR) and NARS ...
- ... ensuring that **global innovations directly benefit local AFS.**
- in parallel, **amplifies the voice of the NARS.**

This collaboration achieves '**high impact at low cost**'.

Building the GNC: a phased approach

The GNC's implementation follows a phased approach over six years to ensure sustainable growth, capacity development, and scalability.
